RAGHAV KUMAR

Software Engineer

Bengaluru, India | +91-6200740550 | raghavkashyap4046@gmail.com | LinkedIn | GitHub

SUMMARY

Software Engineer with 2.4 years of experience building and enhancing enterprise-grade applications, with a strong focus on end-to-end delivery, scalability, performance, and business impact. Experienced in developing application features, integrating and optimizing APIs, improving system reliability, and creating reusable solutions for complex workflows. Effective collaborator and problem-solver who bridges business requirements and engineering execution to deliver stable, scalable, and maintainable software solutions.

TECHNICAL SKILLS

Languages
JavaScript (ES6), TypeScript, HTML5, CSS3, SCSS / SASS

Frontend
React.js, Next.js, Redux Toolkit, Context API, Tailwind CSS, Material UI, AG Grid, Storybook

Backend & APIs
Node.js, Express.js, REST APIs, GraphQL, Apollo Client

Database & Cloud
MongoDB, AWS

AI & LLM
Artificial Intelligence (AI), Large Language Models (LLMs), RAG, Vector DB, Context

AI Tools
Claude, Cursor, GitHub Copilot

Testing
Jest, Vitest, React Testing Library

Build Tools & Workflow
Webpack, Babel, Vite, ESLint, Prettier, VS Code, Git, GitHub, CI/CD, Agile/Scrum, Jira, Postman, Insomnia, Figma.

EDUCATION

Bachelor of Computer Applications (BCA)
Presidency College, Bengaluru
Sep 2021 – May 2024 | CGPA: 7.5 / 10

CERTIFICATIONS

- **AWS Certification** (Cloud)
- **React.js Certification** (Frontend)
- **Express.js Certification** (Backend)

LANGUAGE

- English
- Hindi

PROFESSIONAL EXPERIENCE

UI Engineer
July 2025 – September 2026

Tenarai (Infogain) | Client: HP Inc. — PriceHub, Enterprise Sales Platform

- Leveraged AI for coding guidelines, skill development, and PR reviews to accelerate development while maintaining engineering standards, code quality, and team progress visibility.
- Owned end-to-end delivery of enterprise UI features, translating business requirements into scalable frontend solutions, integrations, validation, and release-ready implementations.
- Drove PI planning, story estimation, and technical discussions with business, QA, engineering teams, and managers, improving requirement clarity, effort assessment, and delivery alignment.
- Drove frontend architecture and engineering quality through reusable components, state-management patterns, API integrations, and scalable UI architecture, reducing code duplication by 40%.
- Performed Root Cause Analysis (RCA) and performance optimization for complex UI systems using React profiling, AG Grid virtualization, memoization, targeted updates, caching, and Web Workers for 10K+ records & reducing editing latency to under 50ms.
- Led code reviews, mentored developers, and supported production delivery by guiding architecture, performance, API handling, and debugging while resolved 180+ production issues and strengthening release stability.

Technologies used: React.js, TypeScript, GraphQL, Apollo Client, AG Grid, Jest, Redux, SCSS, Node.js, REST APIs, Git, GitHub, Jira, Docker and AWS.

Junior Full Stack Developer
May 2024 – July 2025

TEKsystems | Client: HP Inc. — PriceHub, Enterprise Sales Platform

- Engineered enterprise features independently, progressing from guided implementation to full ownership of requirements, solution design, development, integration, testing, and delivery.
- Contributed across frontend and backend layers of enterprise applications to deliver reliable end-to-end functionality.
- Implemented business-critical workflows and validations across UI, API, and business logic layers, supporting workflows involving 500+ products and reducing manual product-entry effort.
- Improved feature reliability and maintainability by refactoring duplicated implementations, introducing reusable UI patterns, and resolving UI/API integration issues to reduce unnecessary complexity.
- Supported feature testing and issue resolution by working with QA and developers to reproduce defects, validate fixes, and troubleshoot application behavior while maintaining 80%+ unit-test coverage.
- Collaborated with backend, UI, QA, and business teams throughout development, testing, debugging, and release validation, progressively taking greater ownership of feature delivery and technical decisions.

Technologies used: React.js, TypeScript, Node.js, GraphQL/Apollo, REST APIs, AG Grid, Redux, SCSS, Material UI, Git, GitHub, Docker, AWS, and Azure.
